

Wavestore® is **ONVIF Profile S Conformant** (Profile G in development) and concurrently supports analogue, network (IP, megapixel, 360 degree, thermal) and HD-SDI cameras. Wavestore maintains a camera testing programme of products from the manufacturers listed, as well as supporting new requests. Due to the many different products available we cannot be certain to have tested all of those cameras or to support unique features that are provided. If you are planning to deploy a specific camera make and model with your Wavestore solution, please contact us at info@wavestore.com with the specific details. In the event that you have a camera that we have not previously tested, we will normally accept one from you for testing and approval.
