

L6A ANPR Camera

See the plate, know the story

Ever catch a vehicle on video, only to find that the license plate is too blurry to read? Or maybe the plate is clearly captured, but you have no idea what happened before or after. Introducing the L6A: built with dual-purpose lenses to capture automatic number plates and record video footage.

One comprehensive solution

The L6A integrates key features of both an ANPR camera and a general security camera to increase workflow, improve awareness and reduce complexity with two cameras in one.

Never miss a detail

Never let a vehicle go by undetected. From day-to-night, precisely capture plates from vehicles traveling up to 160 km/h (100 mph) over 100 m (330 ft) away.

Purpose-built for protection

Access ANPR data directly in Avigilon Unity Video without extra fees. Identify and intercept at-risk vehicles instantly.

Make your life easier

Let the camera do the heavy lifting. ANPR is done onboard the camera to reduce costs, improve performance and increase scalability.

Rest assured knowing you are secured

Trust that your data is well-protected by meeting compliance and advanced cybersecurity features and keep your network and perimeter secured at all times.

Get all the data you need

The L6A is essential for investigators with both video and photographic evidence. The indisputable proof expedites investigations and the time it takes to hold someone accountable, effectively preventing repeat offenders.
